SUMMARY

Detail-oriented BI Data Analyst with a strong analytical foundation and hands-on experience in data visualization, data cleaning, and trend analysis. Proven ability to transform complex data into actionable insights and support business decision-making through effective dashboard design and stakeholder collaboration.

EDUCATION

Bachelor of Technology

Jadavpur University, Kolkata

Higher Secondary

Basanti High School, Kolkata

WORK EXPERIENCE

Data Analyst Research Intern

Jadavpur University CMATER Lab

- Conducted exploratory data analysis (EDA) on 1,097 lung CT scan images, identifying class distributions and potential data imbalances to guide preprocessing strategies.
- Designed and implemented image preprocessing pipelines, including resizing, pixel normalization, and stratified data splitting for robust model training and evaluation.
- Evaluated model generalization across three medical datasets, achieving 95.54%–99.42% accuracy, demonstrating robust cross-domain feature transferability.

PROJECTS

- Executed end-to-end data analysis using Python (Pandas) to clean and explore 3,900 transaction records, generating result statistics to inform business decisions.
- Performed complex data querying using SQL to extract actionable insights, identifying high-spending discount users and comparing revenue contributions to support targeted marketing strategies.
- Developed an interactive Power BI dashboard to visualize customer segments and purchasing patterns, revealing that 'Loyal' customers generate the highest revenue.
- Delivered data-driven recommendations by identifying top revenue-generating age groups and optimizing pricing strategies.
- Collected and unified marketing datasets from diverse inputs, maintaining data quality and reliability.
- Performed exploratory analysis and text-based sentiment evaluation in Python to identify customer perception patterns and overall campaign impact.
- Built a dynamic Power BI dashboard showcasing essential marketing metrics for informed decision-making.
- Built an interactive Power BI dashboard to track attrition, hiring, and diversity KPIs, transforming raw HR data into visual charts for decision-making.
- Engineered a data model by establishing complex relationships between performance reviews, attendance records, and demographic info.
- Maintained data integrity by performing advanced ETL processes in Power Query and Excel, ensuring 100% accuracy in tracking.

TECHNICAL SKILLS

Python

SQL

Power BI

Excel

Data Cleaning (ETL)

Data Visualization

Statistical Analysis

Pandas

NumPy

Matplotlib

Seaborn

LEADERSHIP / EXTRACURRICULAR

Data Drift, Srijan: University's Annual Techno Fest

- Developed problem statements, evaluated submissions, and coordinated the event, attracting 500+ participants from across the country.

Corporate Clash

- Framed case studies and evaluated submissions, generating 100+ registrations.
